Seventy-third session  
Second Committee  
Agenda item 20 (k)  
Sustainable development: the role of the international community in the prevention of the radiation threat in Central Asia  

Canada, Kazakhstan, Kyrgyzstan, Mongolia, Norway, Singapore, Tajikistan, Turkmenistan, Uzbekistan: draft resolution  

The role of the international community in the prevention of the radiation threat in Central Asia  

The General Assembly,  
Reaffirming its resolution 68/218 of 20 December 2013,  
Taking into account the outcome of the high-level international forum entitled “Uranium Tailings in Central Asia: Local Problems, Regional Consequences, Global Solution”, held in Geneva on 29 June 2009,  
Taking into account also the outcome of the international conference entitled “Uranium Tailings in Central Asia: Joint Efforts in Risk Reduction”, held in Bishkek on 24 and 25 October 2012,  
Taking into account further the outcome of the high-level event dedicated to the dangers associated with the former uranium mining activities in Central Asia, which was initiated by the Government of Kyrgyzstan and the European Union and held on the margins of the seventy-second session of the General Assembly on 20 September 2017,  
Taking into account the ongoing efforts of Central Asian States towards the rehabilitation of former uranium facilities in Central Asia,  
Taking into account also the role of the international donor community in providing support to the Central Asian States in addressing these problems at the bilateral and multilateral levels,  
Taking into account further the necessity for a strategic and coordinated approach in the preparation and implementation of programmes aimed at solving the problems associated with uranium tailings in Central Asia,  
Taking into account the efforts made towards the remediation of uranium tailings in Central Asia and the implementation of projects carried out under the
international target programme of the Commonwealth of Independent States on remediation of the territories of States affected by uranium mining industries and projects of the European Commission on conducting an integrated environmental impact assessment and feasibility study for the environmental remediation of the uranium legacy sites of Min-Kush and Shekaftar, Kyrgyzstan, and Degmay and Taboshar, Tajikistan, as well as promising projects planned to be implemented within the framework of the Environmental Remediation Account for Central Asia on uranium legacy sites production,

**Noting** the importance of the strategic master plan for environmental rehabilitation of uranium legacy sites in Central Asia, developed by the Coordination Group for Uranium Legacy Sites of the International Atomic Energy Agency and approved by the competent authorities of the Governments of Kyrgyzstan, Tajikistan and Uzbekistan in 2017,\(^1\)

**Noting also** that the competent authorities of Kyrgyzstan, Tajikistan and Uzbekistan, the International Atomic Energy Agency, the European Commission and the European Bank for Reconstruction and Development, which signed the preface to the strategic master plan on 19 September 2017, will support and promote a coordinated approach to remediation with a view to achieving sustainable and safe results from these activities in Central Asia,

**Noting further** that numerous burial sites of uranium waste and other extremely hazardous radioactive processing wastes are located in densely populated areas of the Central Asian countries,

**Noting also** that many tailings ponds are located in seismically active areas close to population centres and the banks of major rivers in the region and are subject to the threat of natural disasters,

**Reaffirming** the human rights to life, to an adequate standard of living and to the enjoyment of the highest attainable standard of physical and mental health, and stressing in this regard the need to mitigate the impact of natural and man-made disasters in the areas around uranium waste burial sites and tailings ponds in order to avoid loss of human life, as well as immediate and long-term negative consequences for human health,

**Noting** the need to inform the public in a timely manner when conducting work on the prevention of the radiation threat in Central Asia,

**Considering** that, despite the efforts made by the States of Central Asia at the national level and despite the support of international programmes and projects to remediate former uranium mines and tailings ponds, a number of States continue to have serious social, economic and environmental problems associated with former uranium mines and tailings ponds,

**Striving** to contribute to strengthening the security and safety of radioactive materials,

**Expressing gratitude** to donor countries, in particular Czechia, Finland, Germany, Japan, Norway, the Russian Federation, Switzerland and the United States of America, and to international and regional organizations and financial institutions, including the United Nations Development Programme, the International Atomic Energy Agency, the Organization for Security and Cooperation in Europe, the European Union, the Commonwealth of Independent States, the European Bank for Reconstruction and Development, the Global Environment Facility, the World Bank

---

and others, which are providing assistance in addressing the problems of uranium tailings in the Central Asian region,

*Stressing* the need for a coordinated approach in the rehabilitation of former uranium production facilities, particularly in Central Asia, and welcoming the multilateral initiatives undertaken by the international community to pool resources and identify ways of providing assistance to address the problems associated with uranium tailings ponds in the Central Asian region,

*Stressing* the importance of regional cooperation for successful implementation of environmental rehabilitation in Central Asia in order, inter alia, to increase competence, exchange information and use best practices and lessons learned in the management of radioactively contaminated areas in Central Asia and other regions, including through relevant training programmes, and to use the experience gained, in cooperation with the United Nations Development Programme, in addressing the human factor involved in preparedness for accidents and emergency situations at uranium legacy sites with potential transboundary effects and in recovering from them,

*Taking into account* that the Governments and populations of the States of Central Asia are aware of the threat of possible natural or man-made disasters and their global consequences for the lives and the health of a large number of people and for the environment,

*Taking into account also* the rationale for periodically amending the resolution entitled “The role of the international community in averting the radiation threat in Central Asia”, with a view to updating it,

1. *Notes* the importance of remediating areas affected by former uranium extraction plants;

2. *Recognizes* the need to devise and promote effective programmes and projects for the responsible and safe management of radioactive and toxic waste in Central Asia;

3. *Also recognizes* the role of the international community in the prevention of the radiation threat in Central Asia, and emphasizes the importance of adopting preventive and other measures to resolve the problem of radioactive and toxic waste and to remediate the polluted areas in accordance with the highest safety standards and best global practices;

4. *Notes* the recent initiatives taken to strengthen the preparation and implementation of rehabilitation programmes through the identification of priority areas;

5. *Calls upon* the international community to assist the States of Central Asia in resolving the problems of uranium tailings ponds, and emphasizes the importance of regional cooperation in the following priority areas: improvement of the legislative framework in accordance with international standards; management and maintenance at safe levels of uranium and other radioactive and toxic tailings; remediation of tailings ponds and development and implementation of special programmes and projects to improve the monitoring of their safety; raising of public awareness; adoption of measures to prevent people from gaining access to polluted materials; and implementation of socioeconomic, health and humanitarian measures to enhance the quality and standard of living of the population in regions where tailings ponds are located;
6. Notes:

(a) The importance of the strategic master plan developed by the Coordination Group for Uranium Legacy Sites of the International Atomic Energy Agency and approved by the States of Central Asia, which is designed to harmonize projects and demonstrate to the international community the availability of a reliable and jointly developed approach to the implementation of rehabilitation programmes in all of the Central Asian countries and recent initiatives taken to strengthen the preparation and implementation of such programmes on the basis of identified priority areas;

(b) The practical implementation, begun in 2013, of the international target programme of the Commonwealth of Independent States on remediation of the territories of States affected by uranium mining industries, which is an integral part of the strategic master plan;

(c) The need to develop strategies in order to inform the public and other stakeholders of rehabilitation programmes in all of the States of Central Asia;

7. Expresses support for the efforts made by the States of Central Asia in devising and implementing their country programmes, including in mobilizing domestic resources, and encourages the States of the region to hold further bilateral and multilateral negotiations to avert the radiation threat in Central Asia.
